

Mylos.
Serenity in your hands.

The design has a sense of proportion,
technology leaves ample room to emotions.

Mylos, the heart and soul of your home. A blend of style and functionality.

Some people call it “integrated system”. Others “home automation system”.
Some people define it a unique technology solution, others add that it has a state-of-the-art design.
We call it Mylos and it expresses a way of live your home with the utmost comfort, in complete safety
and in full harmony with your own style. If you prefer, you can call it serenity.

Life peaceful, because Mylos is in harmony with all that surrounds it.

Imagine a magnificent panorama. Well, now choose what to see, what sounds to hear, what sensations to feel. A perfect atmosphere, an ideal climate, always and exactly when you want it. You are imagining an integrated system that can be aesthetically and functionally combined with the different components. Four lines of ultra-compact plates, built with the finest materials, pleasant to the touch, fascinating

to the sight, thin and aesthetically coordinated with each inner component. A home automation system that offers you maximum comfort, based on technologies that allow maximum modularity.

You are imagining a new way to live your home: simple, customizable, flexible, technologically and aesthetically evolved, energy-efficient. No need to imagine beyond: Mylos is reality, now the choice is up to you.

Serenity, the true feeling of well-being.

To tap a command, turn on a light, activate a function are no longer trivial and repetitive actions. Every gesture gives a pleasant sensation to the sight, but also to the touch. All Mylos devices are designed for maximum ergonomics and comfort of use and are manufactured with a velvety finish. Is it turning on/off a switch a customary action? Now it becomes a pleasant habit.

Rectangular and rounded shapes.

Mylos is available in two shapes, “square” and “round”, to choose from according to your needs.

- The square plate features clean and minimalist lines, ideal for any room.
- The round plate is more protagonist and less technical, fits to the most sophisticated interiors.

Chrome frame.

Both shapes have a chrome internal frame adherent to the profile, which enriches and gives elegance, without interrupting the geometry.

The design is subtle.

The very small thickness of the edge, the enveloping surface and commands perfectly inserted in the profile, allow the flush-mounting installation, increasing the integration with the wall.

Velvet effect at your single touch.

Mylos switches feature a soft-touch finish. An innovation that gives a pleasant sensory experience. The special paint resists to chemicals and wear and tear over time, letting you enjoy the nice tactile sensation, every day like the first one.

Pleasure for your eyes.

Thanks to the LED technology, the controls are clearly visible and are illuminated for instant identification. When lit, the LED creates a fade effect that fits harmoniously to the design of the plate. When turned off, the illuminated area is completely invisible. Even with its minimal design, Mylos always knows how to get noticed.

The purity, our favorite subject.

We see them every day and almost go unnoticed.
The materials of most common use, like metal, glass and resins become
precious design objects. It takes only a new thought and an expert hand.
Just creativity. And Mylos has plenty of creativity.

Crystal finishes.

Glass is unparalleled in terms of luxury. It can be elegant and simple at the same time, it has great qualities of shape and substance purity.

The two finishes, satin white and satin black, are suited for the most sought after interiors, giving a refined, never excessive style.

Metal finishes.

The most prestigious, the most elegant, the most resistant. The metal is the material that evokes feelings of refinement and quality, emphasizing the qualities of linearity in shades ranging from silver to gold, aluminum, titanium and chrome. With natural satin, brushed or polished finishes.

Velvet finishes.

The technology applied to the polymer generates the innovative velvet finish. The Velvet series offers a soft tactile effect for an unprecedented multisensory elegance. The white white finish stands out among the others, integrating plate, frame and buttons in one single chromatism. An absolutely minimalist design that “disappears” on the wall.

Lucent finishes.

Made from special resins, the Lucent series catches the eye with its glossy shades that recall materials like alabaster, ice... The materials give a technological aspect to this series, perfect for high-tech environments.

The choice, among the most exclusive finishes.

The personality, every choice tells something about you.

Tell us something about yourself. Tell me about your home, and I'll tell you who you are. Our home, the furniture, every single complement reflect our taste. Because everything comes from our choice. Choosing is a freedom Mylos highly relies on. It offers you the chance to select the materials, the nuances, the details, to coordinate plates with your coatings. Making them something yours forever.

The only limit are your ideas.

Mylos offers a wide choice, with a range able to respond to every need. And it can also go further, offering a unique concept of personalized design.

Imprinted logo.

On any plate it is possible to apply, through a special printing technique, a colour logo, writing or symbol.

Frame in the same colour.

The internal chrome frame can be matched to the finish or button colour for an even more co-ordinated design.

Special colours.

In the Velvet range, you can request the desired colours thanks to the wide selection of shades created with the velvety paint that keeps the feeling of softness to the touch.

Also the Metal and Lucent series offer very bright mica or lacquered colours in warm or cold hues.

The invisibility.

If you desire a minimalist interior architecture, Mylos responds with the white white model. The finish takes a candid white total look, integrating perfectly into a completely white wall, and almost disappearing. But when you slide your finger, here it reappears in the form of a silky feeling. Mylos knows how to get noticed even when it is almost invisible.

Mylos Ultra.

Satisfying all of your wishes.

Dressing your own personality means to choose, make your own style recognizable and tangible. In every detail. Mylos Ultra is the expression of choice at the highest degree: a definitely innovative series, that seizes the opportunities of technology to point right to the art and interior design dimension.

Mylos Ultra and its ultra-exclusive partners.

Put ABB, an experienced designer who works with talent using technology as Matthew Costa and three of the most prestigious brands together and here are the more flexible and unique solutions, able to adapt to every style. The luxury Alcantara®, exciting to the touch and amazing at the sight; the high-tech 3M DI-NOC™, an innovative

and refined finish; the fantasy of Jannelli & Volpi® that reinterprets the concept of coating.

Three names, three styles, three guarantees of customization that expand the boundaries of the creative application. A free vent of design to shape the taste and furniture needs. Mylos Ultra never ceases to surprise.

Alcantara®.

Only the most extraordinary beauty is close to perfection.

A unique material protagonist of prestigious applications in the automotive, fashion and design industries, today covers Mylos Ultra finishes with a new sensory experience: soft and comfortable. Discover every day the beauty of the “Made in Italy” and the environment-friendly excellence: a luxury you can allow, touch, live.

3M DI-NOC™.

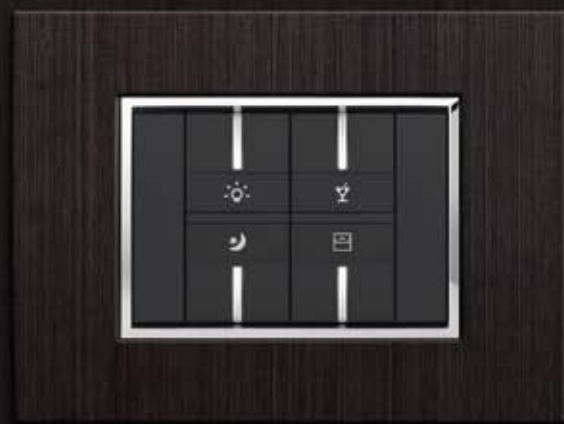

Oltre, a natural desire.

Predicting the future is impossible. But 3M DI-NOC™ is a faithful spokesman, interpreting in a pure way the longing for high-tech of the most modern and minimal interiors.

Definitely rationalist and high-design finishes tell the technological heart and soul of Mylos integrated systems.

Jannelli&Volpi®.

The ability to adapt to every style.

Classic, shabby chic, vintage or stylish. Whatever style you choose, Jannelli & Volpi® and Mylos Ultra redefine the concept of integration with the wall. Simply eliminating the boundaries. The plate camouflages itself, and at the same time stands out precisely in its near absence. In the continuity of materials, it gives the rooms an advanced and seductive design. As entails the tradition of modernity.

Mylos Ultra.

A touch of personality.

Each Mylos Ultra plate by Alcantara® has its own recognizable identity, capable of giving personality and innovation to every interior. A personality to touch. The *Iron* family with its white to gray to brown palette is particularly suitable for discreet luxury rooms. The *Florence* series prefers most refined patterns that emphasize detailed interiors. *Milan* and *Taormina* recall “haute couture” nuances, ideal for sophisticated and up-to-date settings.

By touching the shiny metal or a satin design object gives the perception of a Ultra Mylos finish by 3M DI-NOC™. The amazing feeling offered by this series is linked to the architectural reference materials: carbon, metal, wood and silk in the most fine and smooth shapes. *Abstract* finishes stand out with soft lines and colours, suitable to the most rarefied and elegant atmospheres.

While Mylos Ultra creates new standards, with Jannelli & Volpi® it breaks new grounds by redefining the relationship between the wiring accessories and home environment: no longer functional objects, but real design complements. The Mylos Ultra finishes by Jannelli & Volpi® vary from a design theme, suitable for contemporary settings, to a sober and elegant classical genre, passing through floral patterns with varied and artistic printings.

Design, trends and nuances that repaint new worlds.

Mylos free@home

Making home automation easier then ever.

Small energies coordinated with each other generate a big energy.
Mylos is based on a team spirit: every element performs its function with the common goal of integration, speaking one language: the one of aesthetic and functional beauty.

Mylos Free@home Touch, is the centre of all activity.

From the touch panel you can individually control lighting, air conditioning and security system. Or you can create temperature and lighting scenarios for every daily event. For example, waking up in the morning: with a single command you can set the ideal light, raise the blinds, adjust the room temperature: higher in the bathroom for a shower, and turn off the alarm. Simply tip the control panel and your home comes to life at the touch of your fingers, with an intuitive and easy graphical interface.

Mylos, always with you.

Even when you're out, Mylos communicates with you: you can receive alerts and calls or send commands easily from your mobile phone and have everything under control.

Mylos KNX, beyond all expectations.

Safety, comfort, emotion. The ComfortTouch® and priOn® touch panels are not only the control units of our high-tech environments. They give something extra. A state-of-the-art design, a customization down to the smallest detail, the freedom of multimedia communication and intuitive controls. If you want, call it “emotion”.

The Home Automation becomes big.

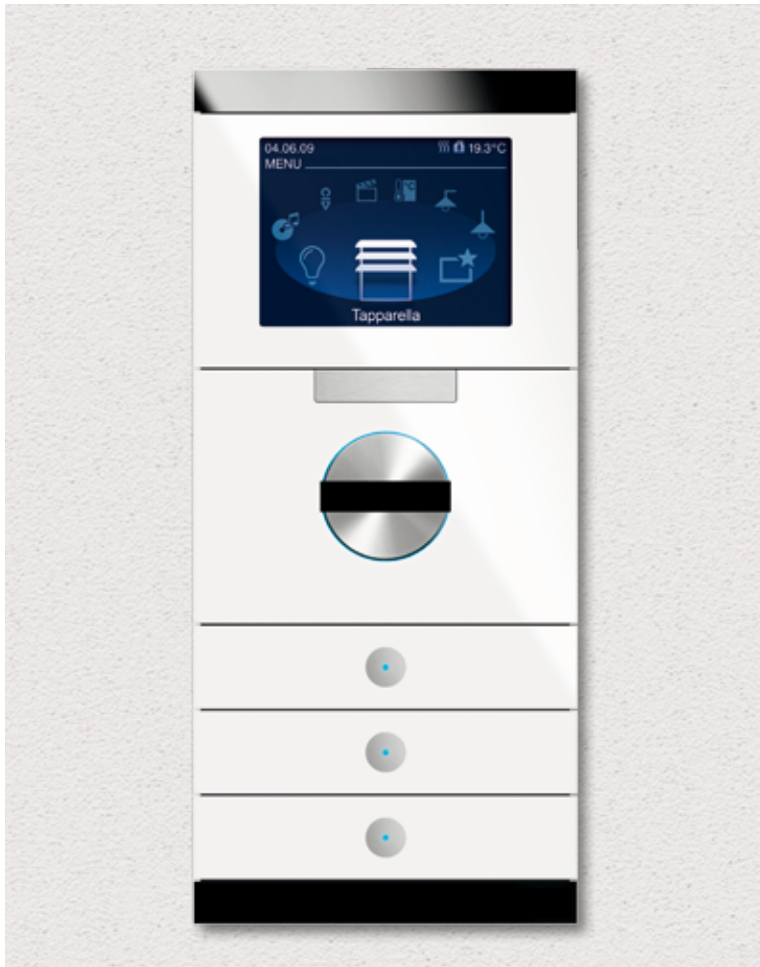

ComfortTouch® and priOn® control units are able to offer a complete and continuous view of all technological systems inside the home and provide many services in any room: from automation functions (lighting control, temperature control, motorization of blinds and shutters, programming and activation of scenarios), to the security, telephony and intercom functions, up to the broadcast of music and video, and much, much more.

Advanced technology and a host of commands and functions that can be executed with ease, because the simplicity and intuitiveness of use are always the top priorities. In fact, each function is marked by a colour according to an extremely simple logic:

- yellow, symbol of the sun, for the management of lights
- blue, symbol of the sky, for the management of shutters
- orange, symbol of the heat, for the management of air conditioning
- magenta, symbol of awareness of life, for the management of comfort scenarios.

PriOn®.

It develops vertically and is equipped with a 3.5" TFT LCD display. It boasts fine materials, like glass in white and black colours, white alabaster and polished steel. The end strips are made of steel or black glass, combinable to integrate with the home and Mylos finishes, especially the Velvet, Metal and Crystal finish series.

ComfortTouch®.

It has a large and bright 10", 16:9-format colour display. The frame is available in black or white glass and the base unit features chrome or aluminum design, combinable with each other to integrate with Mylos finishes, especially Metal, Crystal and Lucent lines.
